Hello,

As a software engineer, I have experience in a number of design, implementation, and development methods in both group and individual environments. I strive for growth in any sector of Computer Science and want to gain experience and knowledge, while improving my skills in programming.

My current role at Qualcomm involves developing core modules and services for the software product suite: Wi-Fi Display for Android devices. This technology enables users to mirror their mobile device screens to wireless displays and even other devices. I am responsible for software bring up in recent Android upgrades (Operating System Releases), maintaining application stability across commercial devices and fulfilling feature requests by customers. The release of this software product suite has been successful and met aggressive timelines. Wi-Fi Display requires extensive analysis and collaboration across functional teams, such as WLAN, Display Hardware, Video Firmware, Linux Security, Audio Driver teams.

I am also leading the development on a new kernel driver that manages power for different hardware components. I am known to work effectively under pressure and can juggle multiple projects at once.

I look forward to hearing back soon and would like to discuss my experience in further detail. I can be reached through email (sebastiandang95@gmail.com) or by phone (714-728-1757).

Thanks,

Sebastian
