Hello,

As a software engineer, I have experience in a number of design, implementation, and development methods in both group and individual environments. I strive for growth in any sector of Computer Science and want to gain experience and knowledge, while improving my skills in programming.

I have worked with many different projects at SMT (*formerly Sportvision*) with a proven ability to develop robust and complex applications, used by our field operators every single day. The projects I am responsible for focus on providing augmented reality effects for live broadcast television, data acquisition for live object tracking, and data analysis tools for different color spaces and computer vision algorithms. Furthermore, a majority of these applications are designed and developed to run in real time environments, with an average turn-around time of milliseconds! I am currently responsible for designing, building, maintaining, extending and supporting a variety of software products across multiple sports. I am known to work effectively under pressure and can juggle multiple projects at once.

I look forward to hearing back soon and would like to discuss my experience in further detail. I can be reached through email (sebastiandang95@gmail.com) or by phone (714-728-1757).

Thanks,

Sebastian
